

The POWER of Our PLATFORM

Rules to Live By

Rules to Live By are mandatory requirements to prevent serious injury, fatality, environmental and radiological events, and operational risk through safe, accountable work practices.

They apply to all employees, contractors, temporary personnel, subcontractors, and visitors under company control.

Non-compliance may result in disciplinary action up to and including removal from site, termination, and regulatory enforcement.

Critical Safety Rules

1. Lockout / Tagout (LOTO) & Clearance

Identify, isolate, lock/tag, and verify zero energy before work begins.

2. Confined Space Entry

Do not enter confined spaces without required permits, testing, controls, attendant coverage, and rescue provisions.

3. Fall Protection

Use approved fall protection for hazards over 4 feet and maintain 100% tie-off where required.

4. IDLH Conditions

Do not create or ignore conditions that place personnel at imminent risk of serious injury or fatality.

5. Lifting & Rigging

Use qualified personnel, approved lift plans, and inspected equipment for all lifting activities.

Stop Work Authority

Every worker has the authority and obligation to stop work when conditions are unsafe or unclear. No retaliation will occur for exercising **Stop Work Authority in good faith.**

Zero Tolerance

High-risk hazards require zero tolerance for deviation. Supervisors and managers must consistently enforce these requirements.

Work safely, follow controls, and intervene when risk is present.
